## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-15, drawn to a method of managing the treatment of patients receiving zonisamide, classified in class 424, subclass 464.
- II. Claims 16-21, drawn to a method of informing and/or assisting health care practitioners with diagnosing pancreatitis of patients receiving zonisamide, classified in class 424, subclass 464.
- III. Claims 22-23, drawn to a method of improving the safety of providing zonisamide to patients, classified in class 424, subclass 464.
- IV. Claims 24-31, drawn to a method of using zonisamide to treat epileptic seizures, classified in class 424, subclass 464.

The inventions are distinct, each from the other because of the following reasons:

Inventions I, II, III and IV are unrelated. Inventions are unrelated if it can be shown that they are not disclosed as capable of use together and they have different designs, modes of operation, and effects (MPEP § 802.01 and § 806.06). In the instant case, the different inventions of methods of managing treatment of patients receiving zonisamide, informing/assisting health care practitioners with diagnosis pancreatitis of patients receiving zonisamide, improving safety in providing zonisamide, and a method of using zonisamide to treat epileptic seizures all can be used separately and have different modes of use. In claims of Group I the examiner will be focused on a method of

Art Unit: 1616

informing patients using zonisimide of adverse symptoms to report to their physician and following treatment. In the claims of Group II informing a health care practitioner on the possibility of the need to diagnose pancreatitis the examiner will be focused on the method of diagnosis and following treatment. In the claims of Group III the examiner will be focused on a method of informing patients as to the possible adverse effects of zonsimide and what symptoms to be aware of. In claims of Group IV the examiner will be focused on a method of treatment of epileptic seizures using zonisimide.

Because these inventions are independent or distinct for the reasons given above and there would be a serious burden on the examiner if restriction is not required because the inventions require a different field of search (see MPEP § 808.02), restriction for examination purposes as indicated is proper.

### ***Election***

A telephone call was made to Edward Grieff on 09/25/2006 at 3:15pm to request an oral election to the above restriction requirement, but did not result in an election being made.

Applicant is advised that the reply to this requirement to be complete must include (i) an election of a species or invention to be examined even though the requirement be traversed (37 CFR 1.143) and (ii) identification of the claims encompassing the elected invention.

The election of an invention or species may be made with or without traverse. To reserve a right to petition, the election must be made with traverse. If the reply does not

Art Unit: 1616

distinctly and specifically point out supposed errors in the restriction requirement, the election shall be treated as an election without traverse.

Should applicant traverse on the ground that the inventions or species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the inventions or species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C.103(a) of the other invention.
